

## 1. Instagram

Instagram revolutionized the way that we consume media upon its launch back in 2010. It is successful due to its sleek and intuitive design. I have a friend who works for instagram and loves her job. I am also drawn to any website or app that is embracing AI.

## 2. Spotify

Launched in 2006, this platform blew Pandora out of the water. Based on the Freemium model, Spotify enticed music lovers of every genre and every budget. Though they have had many competitors arise, Spotify remains incredibly popular with millions of loyal users. They have created a safe space of individuality, customization, and discovery. As well as making music and playlists easy to share and collaborate on. This is another example of a platform embracing AI technology, which really piqued my interest.

### 3. Amazon

Amazon has come a long way from its beginning as a book distributor. They have become the model for many other businesses and now are a dominant force in the tech field. I have a lot of friends and family who work for Amazon, including my brother who is currently a software engineer for them. If you have not noticed a theme, I am drawn to their usage of AI. I would love to work for a company who is putting extensive time, energy, and resources into the exploration of AI technologies.
